

		SCO also disputes IBM's assertion regarding whether the infringed UNIX material was present in Spec 1170, which IBM has not supported. (See Disputed Facts # 11-14.).
216.	In the mid-1990s, IBM, Novell and Santa Cruz participated in a standards-setting consortium known as the Tool Interface Standards (TIS) Committee. IBM has a license to the ELF Material pursuant to a grant of rights from Novell and Santa Cruz. (Ex. 238 ¶ 6; Ex. 438 at i; Ex. 439 at iii; Ex. 215 ¶ 101.)	Disputed/Unsupported SCO disputes that IBM ever received a valid license to use the infringed UNIX material in Linux. IBM has no license to reproduce, distribute, or prepare derivative works based on the infringed UNIX material as part of Linux 2.4 or 2.6, or induce others to do the same. (See Disputed Facts # 15-18, 198.).
	Specification, version 1.2 (Ex. 439). Novell in 1993 granted the TIS Committee (which Novell joined prior to the version 1.2 publication) a license to implement all materials required by the ELF Specification. (Ex. 569; See Ex. 439.) The first sentence following the cover page of these specifications states: "The TIS Committee grants you a non-exclusive, worldwide, royalty-free license to use the information disclosed in the Specifications to make your software TIS-compliant; no other license, express or implied, is granted or intended hereby." (Ex. 438; Ex. 439.)	Neither Novell, Santa Cruz, nor the TIS Committee granted IBM a license to use the ELF material in Linux. (See Disputed Facts # 15-18, 188.).
	in the ELF Specification, or is otherwise designed to make Linux TIS-compliant. (Ex. 214 ¶¶ 43-44, 47; Ex. 215 ¶¶ 99-100.)	Disputed SCO disputes IBM's assertion. Some of the infringing ELF material in Linux, including material in Item 272, was not included in the TIS Specification. (See Disputed Facts # 17-18, 188.). Infringing ELF material was introduced into Linux before inclusion in any TIS

		Specification, and was <u>not</u> introduced in an effort to make Linux "TIS-compliant." (See # 17-18, 188.).
219.	Accordingly, IBM has a license to the ELF Materia from the TIS Committee. The TIS Committee granted IBM and others a license to use the information in these standards or specifications, which require all of the ELF Material. (Ex. 238	Neither Novell, Santa Cruz, nor the TIS Committee granted IBM a license to use the ELF material in Linux. (See Disputed Facts # 15-18, 188.).
220.	The Final Disclosures do not show, and SCO cannot otherwise establish, that the Linux kernel is substantially similar to protectable elements of the System V Works.	SCO disputes IBM's legal conclusion that the Final Disclosures do not show substantial similarity between the protectable elements of the infringed UNIX material and the infringing Linux material. As explained in the expert reports of Dr. Cargill, the material in the Final Disclosures shows that the infringing Linux material was copied from the infringed UNIX material, that the infringed UNIX material is protectable under copyright, and that the infringed UNIX material constitutes a substantial portion of SVr4. (See Disputed Facts # 192, 222-223, 236.). Furthermore, IBM's assertion is a disputed legal conclusion, not an "undisputed fact."
	Code is protectable by copyright. (Ex. 215 ¶ 3 1.)	SCO disputes IBM's assertion that there is no substantial similarity between the infringing Linux material and the infringed UNIX material. (See Disputed Facts # 192, 220, 222.). SCO disputes IBM's legal conclusion that none of the System V Code is protectable by copyright. (See Disputed Facts # 192, 220, 236.). SCO disputes IBM's implication that the only infringing material at issue is "Code," while excluding the non-literal aspects embodied in such code. (See Disputed Fact # 27.). IBM's cited source does not address any of the non-literal infringing Linux material.

		(See Disputed Fact # 118.).
222.	Even if all of the System V Code were protectable by copyright, the Linux kernel is not substantially similar to Linux. (Ex. 215 ¶ 45.)	Disputed SCO disputes IBM's legal conclusion that the infringed UNIX material is not protectable by copyright. (See Disputed Facts # 192, 236.). SCO disputes IBM's assertion that the infringed UNIX material is not substantially similar to the infringing Linux material. REDACTED : Disputed Fact # 192, 233.).
		Furthermore, IBM's cited source does not address any of the non-literal infringing Linux material, which Dr. Cargill has addressed in great detail in his expert reports and was an area examined during his deposition. (See Disputed Facts # 27, 118, 223; Ex. 78 at, e.g., 103:24-104:20.).
	Quantitatively, only a tiny amount of code is claimed to have been copied. (Ex. 215 ¶¶ 31-46.)	SCO disputes IBM's implication that the infringed UNIX material constitutes a "tiny" amount of SVr4. Furthermore, the quantitative amount of copied material is "irrelevant as a matter of law." Dun & Bradstreet Software Servs. Inc. v. Grace Consulting, Inc., 307 F.3d 197, 208 (3d Cir. 2002). Saying the copied material is "tiny" is like saying the heart is a "tiny" portion of the body, but is irrelevant to whether it is "substantial" or valuable. (See Disputed Fact # 190.).

224.	The 12 items relating to the Linux kernel identify	Disputed/Unsupported/Immaterial
	320 lines of UNIX System V code that is alleged to	
-	have been infringed. These lines of code constitute	SCO disputes IBM's assertion that the "Linux Code" is an insignificant portion of SVr4.
	less than five one-thousandths of a percent (.005%)	The infringing Linux material, including the "Linux Code," constitutes a substantial,
1	of UNIX SVr4.2-ES-MP. (Ex. 213 196.) The	significant, and valuable portion of SVr4. (See Disputed Fact # 222.).
	Linux Code does not constitute a significant portion	
1	of UNIX System V code considered in its entirety.	SCO disputes IBM's suggestion that the material copied from UNIX into the Linux
l	(See Ex. 215 ¶¶ 31-46; Ex. 213 ¶ 96.)	kernel constitutes only .005% of UNIX SVr4.2 ES-MP. IBM's cited sources do not
		address any non-literal aspects of the infringing Linux material, and are therefore
		inaccurate. (See Disputed Fact # 27, 118, 223.).
_		REDACTED
		µВМ Ex. 213 (

		SCO disputes IBM's quantitative analysis. IBM's cited sources do not address any non-literal material, resulting in an inaccurate quantitative analysis. (See Disputed Facts # 27, 118, 223.).
		Furthermore, the quantitative amount of copied material is "irrelevant as a matter of law." (See Disputed Facts # 223, 226.).
228.	Qualitatively, there is no substantial similarity between the Linux kernel and protectable elements	Disputed/Unsupported
	of the System V Works. (See Ex. 215 ¶¶ 31-46.)	SCO disputes IBM's suggestion that the infringed UNIX material is not qualitatively substantial. The infringed UNIX material constitutes material of substance and value to, and a qualitatively substantial portion of, SVr4. (See Disputed Facts # 222.).
		SCO also disputes IBM's assertion to the extent it suggests there is not similarity indicative of copying between the infringed UNIX material and the infringing Linux material. The infringing Linux material was copied from the infringed UNIX material. (See Disputed Facts # 192, 220.).
_		REDACTED
		IBM's expert, Mr. Kernighan, claims not to have engaged in a qualitative analysis of the code because he "was not asked to assess the qualitative significance." Ex. 22 at 280:2-3.
		SCO's expert, however, performed an extensive qualitative analysis of the infringing material.
		REDACTED

-		REDACTED
	SCO has not accused Linux of copying header files in general, memory management in general, or even the totality of the UNIX header files. (Ex. 215	SCO dispute IBM's assertion that SCO alleges infringement of "only about 1,600 lines in 53 System V Release 4.0 files." SCO alleges infringement of more than "only about 1,600 lines in 53 System V Release 4.0 files."
	those lines are in the kernel). (See id . ¶ 36.) There are over 235,000 lines in 1,800 header files in the usr/uts directory of SVr4.2-ES-MP (excluding XI I files), so the accused code is well under one percent of the SVr4 interface. (Id .) It cannot be qualitatively significant simply on the grounds of being part of the interface, as it is such a small part of the interface. See id . ¶¶ 31-46.)	Disputed Fact # 231.). SCO disputes IBM's assertion that the cited material "cannot be qualitatively significant simply on the grounds of being part of the interface, as it is such a small part of the interface." The infringed UNIX material constitutes a substantial, valuable, and significant portion of SVr4. (See Disputed Fact # 222.).
		Furthermore, whether the material is a "small" part of anything is legally irrelevant to whether it is qualitatively significant. (See Disputed Facts # 223, 226; REDACTED

		, Disputed

		Facts # 239-240.).
		REDACTED
232.	Item 185 is a small addition to a piece of memory	
	allocation code much of which is in the public domain, while the part of Item 272 code that is implementation is a collection of two dozen elementary functions for accessing ELF data	Disputed/Unsupported SCO disputes IBM's assertion that the material identified in Item 185 is "small." Approximately 100 lines of code shown in Item 185 were copied identically or nearly-identically from System V into Linux. (See Disputed Fact # 190.).
	structures. (Ex. 215 ¶ 41.)	SCO disputes IBM's legal conclusion that the material in Item 185 is in the public domain. Dr. Kernighan, an author of the source cited by IBM, has withdrawn his legal conclusion that the material in Item 185 is in the public domain and IBM's cited source does not put forth facts to support such a conclusion. (See Ex. 22 at 201:4-8; REDACTED
	The cited code is quantitatively a minuscule percentage of the SVr4 (or Linux) code, and is qualitatively inconsequential. See Ex. 215 ¶ 45.) Thus, the cited code is not substantially similar. (Id.)	SCO disputes IBM's assertion that the code embodying the infringed UNIX material is "qualitatively inconsequential." Even small segments of the copied code are extremely substantial, significant, and valuable to SVr4. (See Disputed Fact # 222.). SCO disputes IBM's suggestion that the infringed UNIX material is a "miniscule percentage" of SVr4. The infringed UNIX material constitutes the overall structure of SVr4, which is not "miniscule." (See Disputed Fact # 223.). IBM's cited sources do not address any non-literal material, resulting in an inaccurate quantitative analysis. (See
224		Disputed Facts # 27, 118, 223.). SCO disputes IBM's statement that the infringing Linux material is not substantially similar to the infringed UNIX material. The infringing Linux material is substantially similar to the infringed UNIX material. (See Disputed Facts # 192, 220, 222, 228, 236; REDACTED
234.	When considered both quantitatively and	Disputed/Unsupported

qualitatively, the System V Code is insubstantial. An ordinary reasonable person could not possibly conclude that Linux is substantially similar to the System V Works. (Ex. 212 ¶¶ 5, 19, 26-27, 30; Ex. 213 ¶¶ 91-102; Ex. 214 ¶ 12; 215 ¶¶ 31-46.)	SCO disputes IBM's assertion that the "System V Code" is insubstantial. It is false and based on legally immaterial facts. (See Disputed Facts # 220, 222-23, 226.). SCO disputes IBM's assertion that no "ordinary reasonable person" could find "substantial similarity" between the works. It is an erroneous legal conclusion based on a mistaken interpretation of the law and an insufficient factual basis. (Id.). REDACTED
	SCO disputes IBM's implication that the copied material should be considered quantitatively. The quantitative amount of the copied code is legally irrelevant. (See Disputed Facts # 223, 226.).
None of the System V Code is protectable by copyright law. (Ex. 215 122; Ex. 213 ¶ 103-04.)	Disputed
00py 1930 tam. (2.11. 213 122, 21. 213 103-04.)	SCO disputes IBM's legal conclusion that none of the infringed UNIX code is protectable by copyright law. To the extent that it raises underlying factual disputes, those issues are addressed below.
The System V Code: (1) is dictated by externalities, such as standards, compatibility	Disputed
requirements and programming practices; (2) contains mere ideas, procedures, processes, systems, methods of operation or can be expressed in only a few meaningfully different ways; and/or (3) lacks originality. (Ex. 213 ¶ 103.)	SCO disputes IBM's legal conclusions that the infringed UNIX material "(1) is dictated by externalities, such as standards, compatibility requirements and programming practices; (2) contains mere ideas, procedures, processes, systems, methods of operation or can be expressed in only a few meaningfully different ways; and/or (3) lacks originality."
	The infringed UNIX material was not dictated by external constraints, or otherwise stock, standard, or common, at the time it was created by its authors. (

1	(2/1. 100 0.0.)	6 114 indollar when such material was created.
245.	The header files for SVr4 had to be consistent with	

	was thus dictated by the nature of the programs with which they were designed to interact. (Ex. 215 ¶ 53.) The previous versions of UNIX had header files containing the same three sorts of interface code described below (definition statements, structure declarations and function prototype statements). (Id., 132.)	SCO disputes IBM's assertion that "the structure and content of [the infringed UNIX material] was thus dictated by the nature of the programs with which they were designed to interact." The infringed UNIX material was not dictated by external constraints or compatibility constraints when it was created. (See # 236.). IBM's cited sources do not mention any application programs that supposedly constrained the expression in the infringed UNIX material. However, IBM's acknowledgement that such programs were written to run on UNIX indicates that such programs were constrained by the pre-existing UNIX interface code, not vice versa.
246.	reason for the existence of the allegedly infringed ELF Material. The purpose of the ELF Specification, including the ELF Material, has always been to create an industry standard to promote software portability and interoperability and increase the efficiency of software production. Cross-platform compatibility cannot be achieved without using precisely the interface structures and	Disputed/Unsupported SCO disputes IBM's assertion to the extent it implies that the ELF material was dictated by external constraints. The expression of the ELF material was not dictated by the need to achieve compatibility with any existing material at the time it was created and IBM's cited source does not support such an assertion. (See Disputed Fact # 236; Ex. 22 at 139:18-25.). IBM's cited source does not support the assertion that the ELF material was dictated by external constraints. (Ex. 22 at 139:18-25.).
	UNIX was a second source of compatibility requirements. (Ex. 215 ¶¶ 24, 29, 53.) To keep existing applications running on a new UNIX version like SVr4, the System V Code had to be the same as material used in previous versions of UNIX. "Once a standard [like UNIX] becomes widely accepted, the economic impact of incompatible change becomes so large that change is almost unthinkable." (Ex. 214 ¶ 31 (quoting Ex. 484 at 6).)	Disputed/Unsupported SCO disputes IBM's assertion that prior UNIX versions were, or could possibly be, a constraint on the infringed UNIX material. REDACTED Disputed

	compatibility with older versions of UNIX that were already installed in customer offices. (Ex. 214 ¶ 32; See Ex. 215 ¶¶ 20-24.)	SCO disputes IBM's assertion that the infringed UNIX material was dictated by the need for compatibility with older versions of UNIX. REDACTED (See Disputed Fact # 236
249.	Linux was intended from the beginning to run UNIX-compatible software, and to adhere to the same industry standards and practices that UNIX does. (Ex. 265 at 4.)	Undisputed
	operating system are not free to make choices about	SCO disputes that programmers are not free to make choices about whether to copy UNIX interface material.
		SCO also disputes IBM's implication that external constraints on those who copy UNIX material is relevant to whether such material is protectable. (<i>Mitel, Inc. v. Iqtel, Inc.</i> , 124 F.3d 1366, 1375 (10th Cir. 1997)).
•	Another external force dictating the content of the System V Code was industry standards. See Ex. 213 ¶ 103.)	Disputed The infringed SVr4 material was not dictated by industry standards. 	wide variety of details for any UNIX	Disputed SCO disputes IBM's assertion that the infringed UNIX material was dictated by any industry standards at the time of its creation. The infringed SVr4 material was not dictated by industry standards. REDACTED See Disputed Fact # 236, 251; REDACTED

examples of textbooks with substantial detail,	The SVID was a document authored and distributed by SCO's predecessor, AT&T and was derived from UNIX System V—hence, System V Interface Definition. REDACTED Furthermore, IBM fails to identify which standards purportedly "dictate" what aspects of the infringed UNIX material. Short of providing this information, there is a question of material fact as to whether the standards alleged by IBM actually contain the information in question.
Government, which required in Federal Information Processing Standard 151-1 (April 1989) that UNIX-like systems developed or acquired for government use be POSIX compatible. (See Ex. 213 ¶ 52.)	Disputed/Immaterial SCO does not dispute the issuance of the cited standard. However, SCO disputes that the cited standard constrained any of the expression in the infringed UNIX material. REDACTED Disputed Fact # 236.). Furthermore, material does not lose copyright protection simply because governmental regulations require its use. (See, e.g., CCC Information Servs., Inc. v. MacLean Hunter Market Reports, Inc., 44 F.3d 61 (2d. Cir. 1994)).
creation) was an active participant in the standards setting and standard promulgation process. (Ex. 215 ¶¶ 24-26.) For example, the System V Interface Definition (1985) indicates "AT&T considers its participation in the /usr/group effort to be an important activity and many of the ideas exchanged in that forum are reflected in this document". (Id. ¶ 55.)	Undisputed AT&T's participation in the creation of such "standards" shows that they were not external constraints on AT&T's creativity, but based on AT&T's pre-existing expression. (See Disputed Facts # 251-52.).
 De facto standards have arisen from published documents dating to the earliest days of UNIX.	Disputed/Unsupported/Incomplete

The System V Code was further dictated by programming practice. (Ex. 213 1103.)	Disputed Fact # 236.). IBM fails to identify what code contained in errno.h and signal.h have been published in what sources, which raises a genuine issue of material fact. SCO disputes, and IBM has not supported, IBM's legal implication that mere publication, subject to copyright restrictions in the publishing text, constitutes a license to use the protected material. Furthermore, IBM's claim of a "de facto" standard highlights the fact that this information has not been standardized in any formal sense. Even if IBM was correct that a "de facto" standard negated the protectability of particular expression under copyright law, there is a question of fact as to what expression is subject to this "de facto" standardization. Disputed The infringed SVr4 material was not dictated by external constraints at the time it was
Standard programming practice indicates, for example, that names used in code ought to be brief and mnemonic (to make the code easy to read); that values used in a sequence of defined statements should be sequential small numbers, or sequential powers of 2 (1, 2, 4, 8, etc.); that function	created. (See Disputed Fact # 236.). UNIX programming practice was based on AT&T-created code. AT&T was not constrained by such practices. Undisputed/Immaterial IBM's vague assertions do not indicate that any particular expressions of the infringed UNIX material were dictated by any programming practice or other external constraint. They were not. (See Disputed Fact # 236.).
	The System V Code was further dictated by programming practice. (Ex. 213 1103.) Standard programming practice indicates, for example, that names used in code ought to be brief and mnemonic (to make the code easy to read); that values used in a sequence of defined statements should be sequential small numbers, or sequential

	evident in the System V Code. (See Ex. 213 ¶¶ 44-49.)	
	The memory allocation code claimed by SCO is dictated by the programming practice of implementing a well-known "first-fit" memory allocation algorithm. (Ex. 175 at 82; Ex. 214 ¶ 94.)	Disputed SCO's claimed memory allocation code was not dictated by any particular programming practice. REDACTED (See Disputed Fact # 236;
	demand. (Ex. 215 ¶¶ 50-53, 86-87, 99-122.)	Disputed The expression of the infringed UNIX material was not dictated by any external constraint, including "industry demand." (See Disputed Fact # 236.). SCO also disputes IBM's assertion to the extent IBM implies that the demand for a product like UNIX somehow excuses copying the infringed UNIX material. (See, e.g., Positive Software Solutions, Inc. v. New Century Mortgage Corp., 259 F.Supp.2d 531, 536 n. 9 (N.D. Tex. 2003)).
	The UNIX customer base consists of both those who simply use UNIX and the application programs that run on it, and those whose business is to develop new application programs. (Ex. 106 at 2-3.)	Undisputed
261.	Those who use applications require that their existing applications continue to work. The same group also demands consistency across header files in different versions of UNIX in order to avoid significant complications. (Ex. 215 ¶ 13-14, 52-56 & n.5.)	Disputed/Unsupported SCO disputes that any "industry demand" arising from purported consumer desire to run applications written for UNIX on other operating system did, or could have, constrained the expression in the infringed UNIX material at the time it was created. (See Disputed Fact # 236.). IBM's cited source does not support such an assertion.
		Furthermore, such demand is legally irrelevant. (See Disputed Fact # 259.).

262.	own industry demand. (Ex. 215 ¶¶ 13-14, 21,42, 50, 52.) In order to create application programs that run on UNIX, developers must have access to the header file material they need in a familiar form	Disputed IBM's purported "industry demand" could and did not affect the content of the infringed header file material when it was created. (See Disputed Fact # 236.). Nor does such demand require that competing operating system programmers be able to use any header file material. REDACTED
		Furthermore, such demand is legally irrelevant. (See Disputed Fact # 259.).
	consequence for the header files of any new version of UNIX (like SVr4 in 1989): those header files must be consistent with the header files that have been used in previous versions of UNIX. (Ex. 215)	Disputed IBM's purported "industry demand" does not affect the content of the header file material when it is created. (See Disputed Fact # 236, 261-62.). Furthermore, such demand is legally irrelevant. (See Disputed Fact # 259.).
264.	The developers of SVr4 did not decide on their own either the form or content of the header files; they had to supply what was needed by developers, and they had to supply it in a form that developers would find familiar and convenient to use. (Ex. 215)	SCO disputes IBM's assertion to the extent it implies that the expression of the infringed UNIX material was dictated by external constraints at the time it was created. (See Disputed Fact # 236.). The infringed UNIX material was created by AT&T developers without external constraint. (See Disputed Fact # 236

268.	The nature of the System V Code is such that it can only be expressed in at most a few ways. (Ex. 213)	Disputed
	¶ 60.)	SCO disputes IBM's assertion. There are many ways to express the ideas embodied in the infringed UNIX material. (See Disputed Fact # 236; REDACTED
	The System V Code is inextricably linked to the ideas that underlie it. (Ex. 215 ¶¶ 21-25, 33.)	Disputed
	, an	There are many ways to express the ideas embodied in the infringed UNIX material. (See Disputed Fact # 236; REDACTED
	The ideas expressed by header files are, given the limits of the C programming language and the need	Disputed
	mines of the C programming language and the need	

	ways. (Ex. 213 ¶ 60.) It is as if SCO did not claim the actual idea of the mathematical function "division", but did claim the name of the function as well as the parameters (A ÷ B = C). Just as there are only a few practical ways to express and name "division", there are at most a few ways to express and name the claimed materials in the header files at issue. (Ex. 213 ¶ 60; Ex. 214 190.) All of the header file names at issue are merged with the files' functions, such as "errno.h", which assigns error numbers; "strings.h", which manipulates "strings" of characters (the universal computer term for sequences of text); and "ipc.h", which facilitates inter-process communications. (Ex. 226 ¶ 8.)	There are many ways to express the ideas embodied in the infringed UNIX material. (See Disputed Fact # 236, REDACTED Whereas the term "division" has long been accepted in the English language as the only term to define the mathematical process of dividing number by other numbers, the # define names in the infringed SVr4 material were original creations by AT&T programmers, who just as easily could have used numerous other very different names. Also, there are many different parameters that could be used to perform the same functions performed by the system call signatures in the infringed SVr4 material. (See Disputed Fact # 236: REDACTED Even IBM's expert concedes that there are many choices in naming a system call. See Ex. 22 at 76:18-20. IBM Ex. 226, David Mazieres declaration:
271.	Leaving aside specific choices of names and numbers, there is really only one way of defining names to stand for numbers. Practically speaking,	This source is contradictory and otherwise improper. (See Disputed Fact # 45.). Undisputed IBM's caveat ("[1]eaving aside specific choices of names and numbers") removes protectable expression from consideration. REDACTED There are numerous ways to express the ideas embodied in the infringed SVr4 material. (See Disputed Fact # 236.).
272.	The memory allocation code claimed by SCO is an implementation of a well-known algorithm for allocating and freeing blocks of memory. (Ex. 214)	Disputed The particular implementation of a first-fit algorithm employed in the infringed SVr4

	¶ 95: Ex. 215 ¶ 116.)	material is protectable expression. (See Disputed Facts # 236, 258.).
4	REDACTED	
		Disputed/Unsupported IBM's puzzling assertion is completely unsupported, and too vague for SCO to submit a meaningful response. However, to the extent IBM uses the term "function" to mean a "purpose" or "task," SCO does not claim copyright protection for any such abstract element. (See Disputed Fact # 236;
	96; Ex. 215 ¶¶ 116-17.)	Disputed SCO disputes IBM's legal conclusion that the material in Item 185 is in the public domain. IBM's expert has withdrawn his prior legal conclusion that such material was in the public domain. (See Disputed Fact # 232. REDACTED
(originality. The System V Code is without creativity. (See Ex. 214 ¶ 55, 88; Ex. 213 ¶¶ 39-43, 68-69.)	Disputed/Unsupported IBM's assertion is false. The infringed UNIX material shows at least a minimal degree of creativity, and is the product of thought, judgment, and intellectual production. (See Disputed Fact # 236, 220:19-24.). Furthermore, IBM's experts base their conclusions on "originality" on an arbitrary and undisclosed standard that does not evaluate whether work is the product of thought, judgment, intellectual production, or a minimum degree of creativity. (See Ex. 22 at 203:23-208:10, 216:4-217:4.).
276.	With one exception, the System V Code is	Undisputed

	composed of header files (See Ex. 215 (Ex. H.)),	
	which consist of three mechanisms: # define	
	statements, function prototypes and structure	
277	declarations. (Ex. 213 ¶¶ 27-28.)	
277.	The function prototypes do not provide any	Disputed
	information about how the function is implemented,	
		The expression in function prototypes that constitute part of the infringed UNIX material
i		is not dictated by any external constraint and is not necessary to perform a particular
	prototypes whose names and parameters are	procedure, process, or task. (See Disputed Fact # 236; REDACTED
	determined by the procedures or processes that they	
	invoke. (See id. ¶¶ 40, 43.)	
278.	The header files at issue contain # define statements	Disputed
1	that routinely pair a set of mnemonic names with	
	sequentially incremental values. (See Ex. 213	SCO disputes IBM's assertion to the extent it implies that the creation of names,
i	¶¶ 39-40.) The # de fine statements specify	assignment of names to values, and ordering of names and values in # define statements
	significant values, conventions, shorthands,	do not represent creativity and originality. (See Disputed Fact # 236.)
	abbreviations and the like, which will be utilized in	
1	other processes. (See id. ¶¶ 28, 40.) The names	SCO disputes IBM's assertion to the extent it implies that the names, assignment of
1	cited in the SUS Material are shorthands or	names to values, and ordering of names and values in # define statements do not express
	abbreviations for values or conditions that an	information to programmers. See Disputed Fact # 239.
}	operating system or a program might have to	
	process. (Id. ¶ 39.) The name has only mnemonic	
	significance for programmers. (Id.) Each	
	occurrence of the name anywhere in a source	
	program is replaced by the numeric value during	
	compilation. Virtually all of the numeric values in	
	the header files cited by SCO are sequences of	
	consecutive integers, often beginning at 0 or 1, or	
1	they are sequential bit patterns (i.e., consecutive	
	powers of two) that permit combinations of	
	information to be compactly encoded. (Id. ¶ 40.)	
279.	Few of the structure declaration files contain more	Disputed
	than a dozen members and the majority of them	
		SCO disputes IBM's statement that "[p]articular expressions are common in the kinds of
		structures at issue" to the extent it implies that the expression in the infringed structure

280.	the comments elaborate them. Particular expressions are common in the kinds of structures at issue. (Id.) It is very common for such structures to include elements like message types, message lengths and message contents. (Id) The header files that are not in the Linux kernel are no more expressive than those in the kernel. (Ex. 213 ¶¶ 39-43, 76-77; Ex. 214 ¶ 59.) The ELF	(See Disputed Fact # 236.).
	files (including those not in the Linux kernel) represent one of only a handful of possible implementations of a few rudimentary functions (Item 272). (Ex. 213 ¶ 77.)	ways to express the ideas embodied in the ELF material, or any other infringed UNIX material. There are many ways to express the ideas embodied in the infringed UNIX material. (See Disputed Fact # 236.).
281.	REDACTED	Disputed REDACTED
282.	(Ex. 4).)	Undisputed This is undisputed to the extent the "Linux Code" refers only to literal source code residing within the Linux kernel.
283.	System V Code. (Ex. 215 ¶¶ 69-79, 90-92, 106, 122 (Ex. A).)	SCO disputes IBM's assertion that the infringing Linux material, including the "Linux Code," was created independently. REDACTED Disputed Pacts # 30-33, 98.).

access to System V code when the files in question were authored.	Linux material was copied from the infringed UNIX material. SCO has offered ample evidence showing that the infringing Linux material was copied from the infringed SVr4 material, and IBM has not even attempted to support its assertion to the contrary. (See Disputed Facts # 30-33, 283.). SCO disputes IBM's assertion that Linux programmers did not have access to the infringed UNIX material.
	REDACTED
	Disputed Fact # 283.).
System V Works. (Ex. 215 ¶¶ 70-73, 90-93.)	Disputed/Unsupported SCO disputes IBM's assertion. The evidence shows that Linux programmers copied the infringing Linux material from the infringed UNIX material. (See Disputed Facts # 283-84.).
disclose the identity of the authors of the allegedly infringed files and the facts relating to their	Disputed SCO disputes that its response to the cited interrogatory was not "meaningful." (<u>See</u> Disputed Fact # 167.).
Some of the System V Code plainly was not created by SCO or its predecessors or derived from their UNIX code. (Ex. 215 ¶ 79, 92.)	Disputed/Unsupported SCO disputes IBM's assertion that the infringed UNIX material was not created by SCO or its predecessors. The infringed UNIX material is original to AT&T, a predecessor of SCO. (See Disputed Fact # 236.). IBM's cited source improperly focuses on differences between the infringing Linux material and the infringed UNIX material and does not support the conclusion that the similarities between the two are not the result of copying. (Jacobsen v. Deseret Book
I o c S	The evidence indicates that Linux Code was written receated independently of SCO and its alleged opyrights, and therefore independently of the system V Works. (Ex. 215 ¶¶ 70-73, 90-93.) BM propounded an interrogatory asking SCO to isclose the identity of the authors of the allegedly infringed files and the facts relating to their reation. SCO did not offer any meaningful esponse; it stated only that they were created by CO or its predecessors in interest. (See Ex. 43 at 6-18.) ome of the System V Code plainly was not created by SCO or its predecessors or derived from their NIX code. (Ex. 215 ¶¶ 79, 92.)

	Furthermore, even if IBM could show that individual elements were not created by SCO or its predecessors, the original selection, coordination, and arrangement of these pieces into SVr4 was original expression of AT&T.
In 1994, USL, SCO's alleged predecessor in interest, and Berkeley Software Design Inc. ("BSD"), settled a lawsuit in which USL had alleged that BSD's version of UNIX violated USL's copyrights. (Ex. 485 at 2.) Under the express terms of the Settlement Agreement, certain UNIX files alleged by SCO to be infringed, specifically header files strings.h, syslog.h and utmpx.h, were declared to be copyrighted by BSD, not USL. (Id. at 8-9 (Ex. C at 5, 14, 16).) Among the files declared to be owned by BSD are files that SCO claims it owns and that it claims IBM somehow infringes (Items 217-18, 223, 229-30). (Ex. 43 at 17-18; Ex. 215 (Ex. H).)	SCO disputes IBM's assertion that the Settlement Agreement between USL and BSD (the "BSD Agreement") declared that any material was "copyrighted by BSD, not USL." The BSD Agreement provides that USL did not "waiv[e] any of its proprietary rights." (See IBM Ex. 485 at 8.). SCO also disputes IBM's implication that the BSD Agreement somehow allows the use of infringed UNIX material in Linux. USL agreed that Berkeley and others could copy certain files, on the condition that a specifically prescribed USL copyright notice accompanied such files. (IBM Ex. 485 at 8-9, Ex. F.) The BSD Agreement expressly included a press release containing the following: "Although it has denied the University's claims, USL has also agreed to affix the University's copyright notice to certain files distributed with future releases of the UNIX system and to give credit to the University for material derived from BSD releases which have been included in the UNIX System." Linux does not include the required copyright notices. REDACTED IBM Ex. 485 at 8-9, Ex. D at 4, Ex. F.).
183-84, 205-12, 214-24, 226, 228-31). (Ex. 215 (Ex. H)) 4.4BSD-Lite was published shortly after the settlement of its litigation with USL resulting in "a new, unencumbered version" of the previously-contested BSD UNIX product. (Ex. 485 at 11 (Ex. D at 1)).	SCO disputes IBM's assertion that 4.4 BSD-Lite was "unencumbered" in the sense that material contained therein could be used in contravention of the terms of the BSD Agreement. The 4.4 BSD-Lite system was not "unencumbered" in the sense that material contained therein could be used in contravention of the terms of the BSD Agreement. (See Disputed Fact # 288.). Use of material in Linux does not comply with the requirements of the BSD Agreement. (See id.). Furthermore, IBM provides no documentation to support its assertion that "the 29 Material items and 13 of the 16 Streams Material items appeared in BSD's product '4.4 BSD-Lite," which, at a minimum, creates a material issue of fact as to whether this is true.

		To the extent that USL settled claims regarding the 4.4BSD product, that settlement related specifically to BSD and did not grant any rights to use material in Linux.
	Products derived from BSD's 4.4BSD-Lite product have continued to evolve (See, e.g. Ex. 393), and are outside the control of SCO and its alleged predecessors.	Disputed/Unsupported SCO disputes IBM's assertion that any material included in 4.4 BSD-Lite is "outside the control of SCO." The BSD Agreement allows use of UNIX material only under certain conditions. (See Disputed Fact # 288.). The use of UNIX material within Linux does not
-		comply with such conditions. (Id.). IBM's cited source does not support IBM's legal conclusion that all material contained in 4.4BSD-Lite is "outside the control of SCO and its alleged predecessors."
	2005) (Ex. 393), included lines of code from all but one item concerning the SUS Material, and all but one of the Streams Material items (Items 150-54, 156-64, 183-84, 205-24, 226-31). (Ex. 215 (Ex. H)).	Disputed SCO disputes IBM's assertion to the extent it implies that the presence of UNIX material in FreeBSD 6.0 somehow grants IBM a license to use UNIX material in Linux. The fact that a contemporary release of BSD contains code that infringes SCO's copyrights is not relevant. IBM produces no evidence to suggest that the lines of code included in FreeBSD 6.0 are subject to the USL-BSD settlement agreement or otherwise relevant.
	appeared in BSD products that predate the creation of System V Release 4.2 and 4.2-ES-MP, the copyrights alleged to be infringed by the SUS Material. (Ex. 377.) Code from more than half (16 out of 29) of the items concerning the SUS Material and all but two of the Streams Material items appeared in BSD net/2 (Items 150-53, 156-64, 208-12, 214, 218, 220-21, 223, 226, 228, 230-31).	Disputed/Immaterial SCO disputes IBM's assertion to the extent it implies that the presence of UNIX material in Net/2 somehow grants IBM a license to use UNIX material in Linux. Whether material appeared in Net/2, a product created by an AT&T licensee, is irrelevant to whether use of such material in Linux infringed SCO's copyrights. Such material was created by AT&T, not the Net/2 developers. (See Ex. 22 at 198:13-20; REDACTED As stated above, use of material in Linux does not comply with the conditions of the BSD Agreement. (See Disputed Fact # 288.).

296.	In the APA between Santa Cruz and Novell, Novell	Disputed	
	sold some but not all of its UNIX assets to Santa	•	
	Cruz. (Ex. 239 ¶ 10.) For example, Novell sold	SCO disputes IBM's assertion that Novell did not sell all its UN	IIX assets to Santa Cruz
		under the APA. (See Disputed Fact # 35.).	

	"[a]ll [p]atents", and "[a]ll right, title and interest to the SVRx Royalties, less the 5% fee for administering the collection thereof'. (Ex. 239 ¶ 10; Ex. 123 (Schedule 1.1(b) at 2)).	Novell did not retain any copyrights to UNIX under the APA or Amendment No. 2 thereto. (See Disputed Facts # 35-38.). As discussed above and in Disputed Fact # 298, Schedule 1.1(b) of the APA was amended by Amendment No. 2 to assure (to the extent that such transfer was not already clear) that copyrights related to UNIX and UnixWare were included in the transfer from Novell to Santa Cruz. (See IBM Ex. 444.).
	executed Amendment No. 2 to the APA. (Ex. 239 ¶ 6.) Amendment No. 2 modifies Section V.A of Schedule 1.1(b) to provide that Excluded Assets include: "All copyrights and trademarks, except for the copyrights and trademarks owned by Novell as of the date of the Agreement required for SCO to exercise its rights with respect to the acquisition of UNIX and UnixWare technologies." (Ex. 444.)	SCO disputes IBM's legal conclusion that that "Amendment No. 2 did not transfer the copyrights." (Disputed Facts # 35-38.). The Amadia declaration referenced by IBM is facially flawed as it claims that "Amendment No. 2 was not intended to alter the APA's copyright exclusion" when Amendment No. 2 clearly does alter the copyright exclusion regarding copyrights "required for SCO to exercise its rights with respect to the acquisition of UNIX and UnixWare technologies." (IBM Ex. 163 ¶ 17.).
299.	Neither Amendment No. 2 nor the APA identifies "the copyrights and trademarks owned by Novell as of the date of the Agreement required for SCO to exercise its rights with respect to the acquisition of UNIX and UnixWare technologies". (See Ex. 123; Ex. 444; Ex. 163 ¶ 18.)	Disputed The transferred UNIX copyrights were identified in the APA and/or Amendment No. 2 thereto. (See Disputed Fact # 35, 37.).
	contains any language concerning a grant, transfer,	Disputed IBM's statement is simply false. (See Disputed Fact # 301.).

	Ex. 444; Ex. 163 ¶ 18.)	IBM's purported fact is a legal conclusion, not appropriately included as a material fact, that is addressed in Disputed Facts # 34-38, 298, 301.
301.	Section 1.1(a) of the APA provides that certain assets "will" be transferred. (Ex. 123.) Neither Amendment No. 2 nor the modified APA provides a date for any purported transfer of copyrights. (See Ex. 123; Ex. 444.)	Disputed SCO disputes IBM's implication that Novell's UNIX assets were never transferred to Santa Cruz, as explained below. In full, § 1.1(a) of the APA provides that:
		REDACTED
		(IBM Ex. 123 § 1.1(a)). Section 1.7 of the APA includes subsection (c), which provides that:
		REDACTED
		(IBM Ex. at 123 § 1.7.). To the extent that the original transfer of copyrights to the UNIX software was unclear, Amendment No. 2 contemplates the further action required by § 1.7 of the APA, and in
		fact, takes such action. Accordingly, Novell's UNIX copyrights were transferred to SCO—if not as part of the original APA—as of the closing date set forth in the APA, ab initio, or, in the alternative, as of the execution of Amendment No. 2. (See IBM Ex. 444; Disputed Facts # 34-38.).

1	In May 2002, Caldera International joined with other Linux vendors, Conectiva, Inc., SuSE Linux AG and Turbolinux, to form UnitedLinux. (Ex. 221 ¶ 94; Ex. 106 at 4; Ex. 348.)	Undisputed

306.	property rights in the System V Code or the Linux Code. (Ex. 221 ¶¶ 94-102; Ex. 474 (Ex. C) at SCO1170566-74.)	Disputed SCO does not dispute that the "Pre-Existing Techology and Enhancements" referred to in Exhibit C to the JDC does not include any of the disputed material at issue. SCO disputes IBM's assertion that any technology not referred to in Exhibit C to the JDC was assigned to UnitedLinux. (See Disputed Facts # 114-16, 118, 305.).
307.	REDACTED	Undisputed

REDACTED	
Therefore, under the terms of the JDC that created UnitedLinux, SCO did not retain ownership over any of the materials created by UnitedLinux, including the UnitedLinux 1.0 release that was based on the Linux 2.4 kernel and that contained the Linux Code. (Ex. 221 ¶ 102.)	Disputed/Unsupported SCO disputes IBM's conclusion that SCO did not retain ownership over UNIX material that became part of UnitedLinux 1.0. The language of the UnitedLinux Joint Development Contract, referred to in the Love Declaration, provides:
	The Love Declaration merely parrots the language of the JDC, albeit inaccurately, and is therefore more properly a legal question and not a factual question: "Therefore, other than the above Pre-Existing Technology, all of Caldera's intellectual property rights in the Software developed by UnitedLinux, were assigned to UnitedLinux and are owned by UnitedLinux." (IBM Ex. 221 (Love Declaration, ¶102)). IBM has not shown that the infringed UNIX material was "developed by UnitedLinux." There is a question of fact as to what Software was developed by Caldera pursuant to the JDC; that is, what material was developed by UnitedLinux over and above what already existed in the Linux kernel at the time UnitedLinux began building upon it.

	REDACTED
-	
L	

CONCLUSION

SCO respectfully submits, for all of the reasons stated above and as set forth in Appendix A hereto, that this Court should deny IBM's Motion for Summary Judgment on SCO's Copyright Claim (SCO's Fifth Cause of Action).

DATED this 11th day of November, 2006.
